Confidence bounces back

- Confidence gained 1% last week, recovering a bit more than half the loss seen in the prior survey. The bounce was primarily due to strength in the economic conditions subindices, which is not surprising, given that these were the aspects of the survey that fell sharply in last week’s report.
- Current economic conditions gained 6.1% after the fall of 12.9% in the previous reading, while the future economic conditions figure almost reversed its previous loss by gaining 8.6%.
- Current finances declined by 5.5%, dropping to its lowest level since June, while future finances gained 0.6% for the third consecutive increase.
- The four-week moving average of ‘inflation expectations’ was down by 0.1ppt to 3.9%.

ANZ-Roy Morgan Consumer Confidence and inflation expectations

Last weekend (11-12 Jan)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (4-week ma)
107.3	1.0%	107.6	113.1	3.9%

Data collected last weekend (Saturday and Sunday), based on around 1,000 face-to-face interviews. Not seasonally adjusted. Further data history on page 6.

ANZ Head of Australian Economics, David Plank, commented:

The weekend’s consumer confidence survey is of considerable interest given the plunge in sentiment in economic conditions recorded over the first weekend of January. With milder weather seeing the intensity of fires diminish, though not by enough to prevent further tragic loss of life, and some better economic news in the form of building approvals, job vacancies and retail sales, it is not surprising that much of the weakness in economic conditions reversed. This was enough to push overall sentiment 1% higher. This offers some hope for some recovery in consumer spending after what appears to be a very subdued [Christmas retail season](#).

Confidence gained 1.0%
