April 2020 data

**Expected release date:**  
Monday 4 May 2020

## Job Ads feeling the impact of COVID-19

ANZ Australian Job Ads fell 10.3% m/m in March to be down 18.2% y/y. In trend terms, job ads declined 2.0% m/m and 13.1% y/y.

	Seasonally adjusted			Trend	
	Number	% m/m	% y/y	% m/m	% y/y
<b>Total job ads</b>	136,235	-10.3	-18.2	-2.0	-13.1

See page 4 for [technical details](#)

## ANZ Senior Economist, Catherine Birch, commented:

Job Ads dropped more than 10% in March, the largest monthly fall since January 2009, during the GFC. Most of the fall occurred over the second half of March as Australian COVID-19 cases escalated, restrictions on movement tightened, and shutdowns of non-essential services broadened.

There are some areas where demand for labour may have increased, including health care, supermarkets, and some parts of manufacturing and financial services. But overall, demand for labour is likely to pull back further as the shutdowns continue.

Prior to the JobKeeper payment announcement, we forecast that more than 1.1m workers could lose their jobs and the unemployment rate could rise to a peak of 13% in Q2 from its current 5.1%. However, we think the JobKeeper payment will keep more workers employed and reduce the peak in unemployment – the economic version of “flattening the curve”.

## ANZ Job Ads fell 10.3% in March

<b>Mar 2020</b>	142,504	136,235	-10.3	-18.2	144,082	-2.0	-13.1

Data were revised for 2019.

The internet series counts the average number of job ads carried by each of the sites contributing to the series on the same day of each week in the month indicated. The day (which is not necessarily the same for each site) is selected by the site operator as broadly representative of its activity levels.

The data are based on information provided by the operators of the following sites: Seek.com.au, and the Department of Education, Skills and Employment's Australian JobSearch site (Jobsearch.gov.au).

(a) Concurrent seasonal adjustment method (see [Technical Appendix](#) for further details).

(b) The trend estimates came from applying a 13-term Henderson moving average to the seasonally adjusted series. This smoothing technique enables estimates to be produced for the latest month, but it also results in revisions to the most recent six months as additional observations become available.

## Technical appendix

---

The ANZ Job Advertisements series uses a concurrent seasonal adjustment methodology to derive the seasonal adjustment factors. This means that data from the current month are used in estimating seasonal factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the June 2010 reference month.

The concurrent adjustment methodology uses the most recent data every month, whereas the forward factor approach used it only once a year. Under concurrent adjustment, the seasonal factors will also be more responsive to underlying dynamic changes than forward factors.

Concurrent adjustment can result in revisions to the seasonal factors each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the seasonal adjustment factors for the current month, the previous month and the same month a year ago.

The concurrent seasonal adjustment brings the ANZ Job Advertisements series in line with the methodology used by the ABS for its monthly employment data.

State and territory charts have been discontinued.

### Note for editors

For some of the newspapers surveyed, the ANZ Job Advertisements series counts the number of advertisement 'bookings'. Each booking may contain multiple advertisements. In addition, the series counts classified advertisements only, and does not include display advertisements. For these reasons, it would be incorrect to draw any inference or correlation from the ANZ Job Advertisements series regarding advertising volumes or revenues from employment advertising in the newspapers surveyed. The series is not intended as and should not be used as a tool to assess the financial performance of any of the newspapers it draws information from.
