Job Ads plunge ends in May

ANZ Australian Job Ads gained a marginal 0.5% m/m in May to be down 59.8% y/y.

	Seasonally adjusted			Trend	
	Number	% m/m	% y/y	% m/m	% y/y
Total job ads	63,428	0.5	-59.8	-18.1	-51.3

See page 4 for [technical details](#)

ANZ Senior Economist, Catherine Birch, commented:

The unprecedented 58% fall in ANZ Job Ads over March and April ended in May, with a 0.5% m/m rise in the monthly average. The week-to-week movements are more promising, with job ads improving steadily during May, from a low point at the beginning of the month. This is consistent with the [gradual rollback](#) of COVID-19 restrictions, which has allowed some businesses to reopen, extend trading hours or increase activity and is seeing a recovery in [household spending](#).

A net 600,000 people lost employment in April, and another 600,000 people became underemployed. We expect to see another net employment loss in May, reflecting the weakness in labour demand in the second half of April and early May. But a period of rapid improvement in the labour market is likely from mid-year, as business activity rebounds.

Over the longer term, though, the recovery in employment will be more of a grind. Some firms will prioritise increasing their current workers' hours over hiring new workers and the [fiscal cliff](#) in September looms.

ANZ Job Ads down 60% y/y

May 2020	61,795	63,428	0.5	-59.8	78,915	-18.1	-51.3

The internet series counts the average number of job ads carried by each of the sites contributing to the series on the same day of each week in the month indicated. The day (which is not necessarily the same for each site) is selected by the site operator as broadly representative of its activity levels.

The data are based on information provided by the operators of the following sites: Seek.com.au, and the Department of Education, Skills and Employment's Australian JobSearch site (Jobsearch.gov.au).

(a) Concurrent seasonal adjustment method (see [Technical Appendix](#) for further details).

(b) The trend estimates came from applying a 13-term Henderson moving average to the seasonally adjusted series. This smoothing technique enables estimates to be produced for the latest month, but it also results in revisions to the most recent six months as additional observations become available.

ANZ Job Ads in relation to other indicators

The ANZ Job Advertisements series uses a concurrent seasonal adjustment methodology to derive the seasonal adjustment factors. This means that data from the current month are used in estimating seasonal factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the June 2010 reference month.

The concurrent adjustment methodology uses the most recent data every month, whereas the forward factor approach used it only once a year. Under concurrent adjustment, the seasonal factors will also be more responsive to underlying dynamic changes than forward factors.

Concurrent adjustment can result in revisions to the seasonal factors each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the seasonal adjustment factors for the current month, the previous month and the same month a year ago.

The concurrent seasonal adjustment brings the ANZ Job Advertisements series in line with the methodology used by the ABS for its monthly employment data.

State and territory charts have been discontinued.

Note for editors

For some of the newspapers surveyed, the ANZ Job Advertisements series counts the number of advertisement 'bookings'. Each booking may contain multiple advertisements. In addition, the series counts classified advertisements only, and does not include display advertisements. For these reasons, it would be incorrect to draw any inference or correlation from the ANZ Job Advertisements series regarding advertising volumes or revenues from employment advertising in the newspapers surveyed. The series is not intended as and should not be used as a tool to assess the financial performance of any of the newspapers it draws information from.
