**Expected release date:**  
Tuesday 9 June 2020

## Job ads halve in April

ANZ Australian Job Ads fell 53.1% m/m in April to be down 62.2% y/y. In trend terms, job ads declined 11.2% m/m and 33.9% y/y.

	Seasonally adjusted			Trend	
	Number	% m/m	% y/y	% m/m	% y/y
<b>Total job ads</b>	63,806	-53.1	-62.2	-11.2	-33.9

See page 4 for [technical details](#)

## ANZ Senior Economist, Catherine Birch, commented:

With non-essential services shut down throughout April, ANZ Job Ads tumbled by 53% during the month. This was almost five times the previous record monthly fall of 11.3% in January 2009, which was during the GFC.

Job ads fell progressively over the month, adding to the evidence that the downturn in activity is impacting businesses and the labour market at an unprecedented speed.

- New ABS data show that total employee jobs fell 5.5% w/w and total employee wages paid fell 5.1% w/w in the week ending 4 April.
- An ABS survey reported that 47% of trading businesses made changes to their workforce in the last two weeks of March as a result of COVID-19.
- Department of Social Services data show that the number of total jobseekers (recipients of Newstart/JobSeeker and Youth Allowance (other)) has increased by more than 530,000 in the six weeks to 24 April.

Although we think the JobKeeper payment will flatten the peak in the unemployment rate to 9.5% in Q2, there will still be substantial loss of employment, hours worked and household income over the coming months.

## ANZ Job Ads fell 53.1% in April

<b>Apr 2020</b>	62,391	63,806	-53.1	-62.2	108,149	-11.2	-33.9

The internet series counts the average number of job ads carried by each of the sites contributing to the series on the same day of each week in the month indicated. The day (which is not necessarily the same for each site) is selected by the site operator as broadly representative of its activity levels.

The data are based on information provided by the operators of the following sites: Seek.com.au, and the Department of Education, Skills and Employment's Australian JobSearch site (Jobsearch.gov.au).

(a) Concurrent seasonal adjustment method (see [Technical Appendix](#) for further details).

(b) The trend estimates came from applying a 13-term Henderson moving average to the seasonally adjusted series. This smoothing technique enables estimates to be produced for the latest month, but it also results in revisions to the most recent six months as additional observations become available.

## Technical appendix

---

The ANZ Job Advertisements series uses a concurrent seasonal adjustment methodology to derive the seasonal adjustment factors. This means that data from the current month are used in estimating seasonal factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the June 2010 reference month.

The concurrent adjustment methodology uses the most recent data every month, whereas the forward factor approach used it only once a year. Under concurrent adjustment, the seasonal factors will also be more responsive to underlying dynamic changes than forward factors.

Concurrent adjustment can result in revisions to the seasonal factors each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the seasonal adjustment factors for the current month, the previous month and the same month a year ago.

The concurrent seasonal adjustment brings the ANZ Job Advertisements series in line with the methodology used by the ABS for its monthly employment data.

State and territory charts have been discontinued.

### Note for editors

For some of the newspapers surveyed, the ANZ Job Advertisements series counts the number of advertisement 'bookings'. Each booking may contain multiple advertisements. In addition, the series counts classified advertisements only, and does not include display advertisements. For these reasons, it would be incorrect to draw any inference or correlation from the ANZ Job Advertisements series regarding advertising volumes or revenues from employment advertising in the newspapers surveyed. The series is not intended as and should not be used as a tool to assess the financial performance of any of the newspapers it draws information from.
