ANZ Job Ads: past the peak?

ANZ Australian Job Ads¹ decreased 1.1% m/m in July, following a slight downward revision of the June number. We may have passed the peak in job ads, but the large volume of unfilled demand means the labour market will likely continue to tighten. We now expect the [unemployment rate to fall below 3%](#) by early-2023.

	Seasonally adjusted		
	Number	% m/m	% on Jan 2020 (pre-COVID)
Total job ads	237,047	-1.1	54.4

See page 4 for [technical details](#)

ANZ Senior Economist, Catherine Birch, commented:

ANZ Job Ads decreased 1.1% m/m in July, a signal that we may be past the peak. But even if labour demand growth is starting to ease, we don't think that will translate immediately into rising unemployment and underemployment.

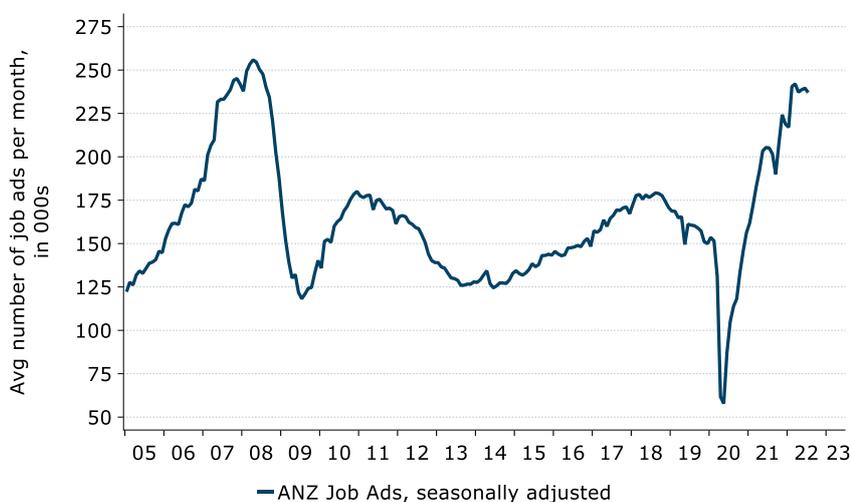

In fact, **we now forecast unemployment to fall below 3% by early-2023.**

This reflects both the sharp improvement in the June data, with employment rising by 88,400 and unemployment dropping 0.4ppt to 3.5%, as well as the record high job vacancy rate. ABS job vacancies have significantly outpaced ANZ Job Ads during the pandemic recovery, as discussed in [last month's report](#), but both point to a significant volume of unfilled labour demand.

There are 480,000 job vacancies across the economy, with sharp rises evident in most industries and geographies. Consequently, as higher inflation and rising rates curtail demand growth, it will take time for the gap between labour demand and supply to close enough to put upward pressure on unemployment.

Newly arrived skilled migrants, temporary visa holders, students and backpackers are adding to the supply of workers, but also to already strong demand. So, while the return of migration improves labour mobility and matching, it doesn't mean the gap is going to close quickly.

ANZ Job Ads decreased 1.1% m/m in July

Data sources

The internet series counts the average number of job ads carried by each of the sites contributing to the series on the same day of each week in the month indicated. The day (which is not necessarily the same for each site) is selected by the site operator as broadly representative of its activity levels. The data are based on information provided by the operators of the following sites:

- Seek.com.au
- Department of Education, Skills and Employment's Australian JobSearch site (Jobsearch.gov.au).

As of the November 2020 release, newspaper job ads have been excluded from the series from January 2019 onwards, and the historical data were revised. Prior to this, for some of the newspapers surveyed, the ANZ Job Ads series counts the number of advertisement 'bookings'. Each booking may contain multiple advertisements. In addition, the series counts classified advertisements only and does not include display advertisements. For these reasons, it would be incorrect to draw any inference or correlation from the ANZ Job Ads series regarding advertising volumes or revenues from employment advertising in the newspapers surveyed. The series is not intended as and should not be used as a tool to assess the financial performance of any of the newspapers it draws information from.

Seasonal adjustment and trend

The X-11 ARIMA seasonal adjustment method has been used since the November 2020 release. Note that new and revised original data can result in revisions to the seasonal factors applied to historical estimates.

Note that the trend data series has been suspended during the COVID-19 period. This is in line with the ABS's suspension of trend data series as "the interpretation of trend estimates during the period affected by COVID-19 could be misleading".
