Job Ads recovery stalls

ANZ Australian Job Ads rose 1.6% m/m in August following the 19.1% increase in July. Job Ads are still down 27% since February and down 30% y/y.

Seasonally adjusted			
	Number	% m/m	% y/y
Total job ads	109,103	+1.6	-30.0

See page 4 for [technical details](#)

ANZ Senior Economist, Catherine Birch, commented:

The solid rebound in ANZ Job Ads in June and July – which saw more than half the pandemic losses recovered – did not continue into August, with just a 1.6% m/m rise.

With Victoria accounting for more than 26% of the nation's pre-pandemic employment, the Stage 4 restrictions in Melbourne and Stage 3 in regional Victoria have undoubtedly put the brakes on. Predictably, new [SEEK job ads](#) in Victoria have fallen; but SEEK also notes that the improvement in New South Wales ads has been sluggish compared with other parts of the country. This is consistent with weekly payroll data, which show Victorian jobs falling and New South Wales jobs coming to a standstill.

We expect outright falls in national employment in August and September. Q4 is also looking worrying, given the amount of fiscal support to workers, businesses and households scheduled to be withdrawn, particularly with Victoria only gradually emerging from lockdowns. Over the longer-term, we think that [governments' key focus](#) for the economic recovery will be employment growth. This will require tens of billions of dollars of additional spending.

ANZ Job Ads rose 1.6% in August

Aug 2020	115,609	109,103	1.6	-30.0	92,742	3.9	-41.5

The internet series counts the average number of job ads carried by each of the sites contributing to the series on the same day of each week in the month indicated. The day (which is not necessarily the same for each site) is selected by the site operator as broadly representative of its activity levels.

The data are based on information provided by the operators of the following sites: Seek.com.au, and the Department of Education, Skills and Employment's Australian JobSearch site (Jobsearch.gov.au).

(a) Concurrent seasonal adjustment method (see [Technical Appendix](#) for further details).

(b) The trend estimates came from applying a 13-term Henderson moving average to the seasonally adjusted series. This smoothing technique enables estimates to be produced for the latest month, but it also results in revisions to the most recent six months as additional observations become available.

ANZ Job Ads in relation to other indicators

The ANZ Job Advertisements series uses a concurrent seasonal adjustment methodology to derive the seasonal adjustment factors. This means that data from the current month are used in estimating seasonal factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the June 2010 reference month.

The concurrent adjustment methodology uses the most recent data every month, whereas the forward factor approach used it only once a year. Under concurrent adjustment, the seasonal factors will also be more responsive to underlying dynamic changes than forward factors.

Concurrent adjustment can result in revisions to the seasonal factors each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the seasonal adjustment factors for the current month, the previous month and the same month a year ago.

The concurrent seasonal adjustment brings the ANZ Job Advertisements series in line with the methodology used by the ABS for its monthly employment data.

State and territory charts have been discontinued.

Note for editors

For some of the newspapers surveyed, the ANZ Job Advertisements series counts the number of advertisement 'bookings'. Each booking may contain multiple advertisements. In addition, the series counts classified advertisements only, and does not include display advertisements. For these reasons, it would be incorrect to draw any inference or correlation from the ANZ Job Advertisements series regarding advertising volumes or revenues from employment advertising in the newspapers surveyed. The series is not intended as and should not be used as a tool to assess the financial performance of any of the newspapers it draws information from.
